

Greyhound

Our Greyhound PRO Series is a 4X4 MIMO cellular directional antenna. The Greyhound is designed to maximize C-band for enterprise networks. The Greyhound overcomes low band frequencies and prevents interference while transmitting CBRS frequencies for high-speed enterprise data application.

Reduce Noise

The ultimate C-band solution for high data users. With specialized tuning for 1800-4200 MHz, the Greyhound utilizes high gain to focus energy directly towards your cell tower to achieve greater throughput by cutting out low band frequencies. By eliminating external noise, your network can travel faster and farther giving you higher uplink and downlink speeds.

Long Distance

For networks located far from cell tower infrastructure, the Greyhound overcomes the challenge with patented antenna technology. The Greyhound utilizes high gain to focus energy directly towards your cell tower to achieve greater distance without compromising signal strength. When you need long range, high-speed enterprise data, the Greyhound should be your first choice.

Pole Mount
IP67 rated for external
pole mount ideal
for enterprise solutions

Taller Design
Proper element placement
for increased isolation
and gains
