

DUAL-CARRIER 5G ANTENNA!

Great Pyrenees

Mobilize an industry first by Parsec Antennas with the Great Pyrenees! Support dual-carrier solutions in a dual radio setup without interference all in one package. The Great Pyrenees is a design breakthrough from our Husky antenna that is used for vehicle mounts on mobile solutions, such as bus fleets, for high performance throughput in rural and urban environments.

Durable Hardware

The high end rugged radome of the Great Pyrenees antenna keeps any unwanted water, dust, or other contaminants from affecting the antenna elements. Designed with a hard shell to resist harsh impacts and a powerful gasket to withstand highway speeds and inclement weather. Parsec's external antennas won't buckle under the pressure!

Constant Communication

The Great Pyrenees is a dual 4X4 MIMO cellular, omni-directional antenna designed as a primary/failover solution for consistent communications. This antenna can also include Wi-Fi and GPS, perfect for bus applications and E-rate funding. Forget drilling 2 holes in the roof, use a single Great Pyrenees for your all-in-one solution that supports rooftop and pole mount for large vehicle fleets.
