

SIMPLE ACCESS

5G CASE ANTENNA!

Bernese Mountain Dog- G2

The case trusted by public safety officials and school bus systems across the nation is now even better. Beginning with the design of one of our most popular case antennas, Parsec incorporated innovative design functionality to meet the evolving needs of our customers. The exact same, high performance antenna technology with easy to access battery and router for case operations.

Router Management

The latest innovation of the swivel door allows for quick access to your router without having to uninstall. Managing your SIM card usage has never been easier. With your router mounted to the swivel plate, remove the four screws securing your solution to access the cut outs aligned for SIM card installation. The windows to the plate allow for monitoring of the router's LED indicators while operating the case.

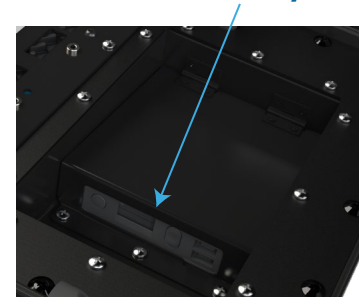

4 Screw Swivel Door

Battery Access

Deploying the Bernese Mountain Dog is faster with direct access to the battery interface upon opening your case. The cut out gives you visuals on the smart power readings of the OLED screen to monitor battery life and health. Unscrew the three screws to open the hinge door and remove your battery for charging and reinstall just as quickly.

On-The-Go Battery Access
